

Technology Integration Committee

2016 Annual Report

Dr. Bryan R. Drost, Chairperson

The technology team has addressed the following this year:

- (1) **Increasing Communication:** The team has been tweeting two-to-three times a week with tech tips that will help support your students with proficiency goals. Please follow us at OFLATech on Twitter to learn more about proficiency-based instruction, technology, the modes of communication, and good teaching!
- (2) **Providing Tech-Based Resources** The team by the end of the first semester created 15 tech-based activities aligned to the modes of communication to help support teachers working on proficiency-based instruction. Check out the LiveBinders at <http://tinyurl.com/oflalessons> to see the lessons. The group is in the process of developing a checklist of things to think about when planning on instruction in the world language classroom related to technology.
- (3) **Professional Development:** Our PD restructure has been successful. We have offered one novice level workshop, one intermediate, and are working on the advanced. At the CSCTFL we will be offering one more intermediate workshop.
- (4) **OFLA List serv.** The Board has been exploring a transition to a new listserv platform to support the needs of our subscribers. An adhoc committee was recently established to determine next steps. More information will be coming over the next few months.
- (5) **Integration:** We are still in the process of finding a way to integrate all of the various member tools we have to create a one-stop OFLA shop.

Respectfully submitted,

Dr. Bryan R. Drost
Chairperson
